

IFS Growth Model – September 2018 Quarterly Report

Actual asset allocation as at 30 September 2018

- Cash 4%
- Fixed Interest 28%
- Alternative Debt 4%
- Liquid Alternatives 5%
- Property 6%
- Australian Shares 29%
- International Shares 24%

Fund Objective

The Growth model aims to achieve a return of inflation + 2.75% p.a. on a rolling seven-year basis. Since inception in July 2012, a notional investment of \$10,000 would now be worth \$18,840.

Performance Review

	3 Months %	1 Year %	3 Years %	5 Years %
Net return	2.28	9.41	8.32	8.32
Objective (CPI + 2.75%)	1.04	4.83	4.43	4.66
Standard deviation			4.85	6.04
<i>Standard deviation – ASX 300 index</i>			8.97	10.59

Net return is shown after investment fees and costs but before administration fees. Standard Deviation is a historical measure of the degree to which the portfolio's returns varied over time. The higher the standard deviation, the greater the likelihood that a portfolio's performance will fluctuate and exhibit volatility. Lower standard deviations indicate that the historical returns have been less volatile.

Growth of \$10,000

Fund facts	
Inception date	1 July 2012
Portfolio manager	Industry Fund Services
Asset Consultant	Frontier Advisors
Recommended investment timeframe	7 years plus

Risk objective	Limit negative annual returns to 1 in 4
Investment Management fee	Direct: 0.15% (cap \$5m) Indirect: 0.16% Total: 0.31%

Fund Commentary

September was a solid quarter, returning 2.28% despite equity markets retreating during the last month of the quarter.

The portfolio has 55% of its equities in Australian shares (the other 55% being in International shares). This positioning failed to pay off during the September quarter, with the Australian market lagging major overseas markets. However, the 15% allocation to foreign currency (as only a third of international share exposures are currency hedged) helped substantially. As the Australian dollar continued to weaken, the currency exposure contributed 0.25% to the quarterly return.
